About

The purpose of this design project is to address the existing operational deficiencies of I-75 and Daniels Parkway Interchange within Lee County and to accommodate future travel demand projections because of forecasted population and employment growth.

The interchange improvements include the design of a diverging diamond interchange (DDI), which will significantly reduce delays on Daniels Parkway and reduce the number of conflict points to improve overall safety for all users. The DDI also offers the ability to accommodate future traffic volume growth. Proposed improvements are located within the limited access right-of-way.
