About

The Bradenton-Palmetto Connector proposes to provide additional capacity and improve mobility over the Manatee River, specifically between the Cities of Bradenton and Palmetto. A total three (3) corridors were evaluated during the Project Development and Environment (PD&E) Study. A proposed Preferred Alternative will be presented at the Public Hearing.

Specific right-of-way needs will be determined during the subsequent design phase, with any potential acquisition occurring during the project's right-of-way phase.
