What is a Full Median U-Turn?

Full Median U-turn Intersections (MUTs) replace direct left turns with indirect left turns by using U-turn crossovers past the main intersection.

This design reduces conflict points at the main intersection and contributes to the overall safety and efficiency of the corridor.

Compared to a traditional signalized intersection, the proposed MUT provides significant safety benefits, with 30 percent fewer predicted fatal and injury crashes and 15 percent fewer predicted total crashes.
