

LEVEL 1 CONTAMINATION SCREENING EVALUATION REPORT

Florida Department of Transportation

District 1

SR 72 PD&E Study

Limits of Project: from CR 661 to SR 70 AND SR 70 from CR 661 to the Peace River Bridge

DeSoto County, Florida

Financial Management Number: 443123-1-52-01

ETDM Number: N/A

Date: August 31, 2023

The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being, or have been, carried out by the Florida Department of Transportation (FDOT) pursuant to 23 U.S.C. § 327 and a Memorandum of Understanding dated May 26, 2022, and executed by the Federal Highway Administration and FDOT.

1.0 Executive Summary

This Level I Contamination Screening Evaluation Report (CSER) was prepared to support the SR 72 Project Development and Environment (PD&E) study located in DeSoto County, Florida. The purpose of this CSER is to present the findings of this Level I contamination screening evaluation. This report also presents recommendations for additional analysis for any High and Medium rated sites. The study was performed in accordance with Part 2, Chapter 20 of the Florida Department of Transportation's Project Development and Environment Manual (July 1, 2020). Additional Right-of-Way is anticipated to accommodate the proposed project improvements for both the roadway and associated drainage improvements.

Based upon the methodologies completed for this study, the following risk ratings were assigned to the contamination sites identified within the project study area:

Table 1 - Summary of Contamination Risk Ratings

Number of Contamination Sites per Risk Rating			
High	Medium	Low	No
0	5	14	2

Additionally, the only drainage site included in the project study area is assigned a Medium risk rating.

Based upon the conclusions of this study and the risk ratings noted above, the following recommendations are made:

- The report and associated risk ratings should be updated if any additional information becomes available after the date this report was prepared.
- No further action is required for any sites rated No or Low. These locations have been determined not to have any contamination risk to the project study area at this time.
- If deemed appropriate by the District Contamination Impact Coordinator (DCIC), Level II testing is recommended for the Medium Risk sites identified in this report. These include two citrus groves, two bridges, and the Sunoco gas station at the corner of SR 72 and SR 70. A site-specific Level II Scope of Services should be developed to be reviewed and approved by the DCIC.
- If any work is proposed for the bridge structures, buildings, and/or existing or abandoned utilities located within the project study area, an asbestos survey and screening for metals-based coatings should be performed.
- Once final design plans are available, additional review is recommended in consideration of dewatering operations that may be necessary under the *National Pollutant Discharge Elimination System Generic Permit for Stormwater Discharges from Large and Small Construction Activities*. Verification testing may be warranted for contamination issues within 500 feet of the dewatering area.

2.0 Introduction

The Florida Department of Transportation (FDOT), District One, is conducting a Project Development and Environment (PD&E) study for the proposed improvements, including raising the vertical profile of both SR 70 and SR 72, and consideration of a single lane roundabout at the intersection of SR 70 and SR 72 in Arcadia, Florida. The purpose of this PD&E study is to evaluate and document potential engineering and environmental effects of any proposed safety improvements considered, including acquiring right of way in DeSoto County, Florida. Alternatives to be evaluated include pedestrian and bicycle crossings, multi-use pathways to provide safe connectivity for the area, shifting the alignment of SR 72, the construction of roadside ditches and a dry detention pond, and the reconstruction of SR 70 from CR 661 to the Peace River Bridge (**Figure 1**). The project area is being evaluated for resilient design concepts that would raise the roadway to alleviate flooding caused by the Peace River.

Purpose and Need

The purpose of this PD&E study is to evaluate resilient design concepts to alleviate flooding on SR 72 and SR 70 caused by the Peace River. Severe storms and historic flooding have been known to inundate segments of SR 72 and SR 70, which consequently restrict mobility in the region, and affect safety for the local communities. As part of this study, we will document potential engineering and environmental effects, including right of way. Alternatives will be resiliency focused and include raising the roadway profiles of SR 72 and SR 70 in the locations where flooding is most prevalent. Another purpose for this study is to evaluate the operations of the SR 72 and SR 70 intersection relative to safety and capacity.

Project Background

SR 70 provides intrastate travel between the City of Fort Pierce, St Lucie County on the east coast to the City of Bradenton, Manatee County on the west coast and spans five counties. SR 72 is an alternative route to the coast starting from its Eastern terminus at SR 70 and is the most direct route to Siesta Key, Sarasota, and Venice in Sarasota County. Maintaining access to this route is crucial for commerce, safety, and the overall transportation network and regional connectivity.

The segment of SR 72 between CR 661 and SR 70 has been prone to severe flooding over the years. The Federal Emergency Management Agency's (FEMA) effective Flood Insurance Rate Maps (FIRMs), dated November 6, 2013, depict Zone AE, A, and X floodplain limits within the project proximity. The Zone AE floodplains, which are areas that have a 1% chance of annual flooding, and are consistent with the Peace River and its overbank area. This riverine floodplain encroaches into the SR 72 and SR 70 right-of-way and has a Base Flood Elevation (BFE) of 25.0 feet and 26.0 feet. The Zone A floodplains, which are areas that have a 1% annual chance of flooding, but do not have an established BFE are located along the western portion of SR 72 within the project limits. Several publications and other historical records have shown this portion of the roadway frequently inundating during hurricane season. A shallow base clearance coupled with repeated flooding, decreases the overall service life of the roadway and leads to more unscheduled repairs and maintenance. The project area is within an open basin where runoff flows via sheet flow to roadside ditches and through existing cross drains in a general southeast direction towards the Peace River. Frequent flooding restricts regional travel as well as adversely affects access and mobility

Figure 1 - Location Map

for the local community. Public safety is at notable risk during these flooding events as it can delay emergency response from first responders, restrict access to important shelters, hospitals, or medical facilities and restrict access to other goods and necessities.

The proposed project does not address any capacity deficiencies along the corridor. The proposed project modifies the traffic operations for both corridors with the introduction of the roundabout. The secondary improvement discussed is replacing the stop-controlled intersection with a roundabout. A 2014 Roundabout Feasibility Study which screened the operational, geometric, and safety conditions at the intersection of SR 72 and SR 70 for a roundabout. In 2021, a Stage I Intersection Control Evaluation (ICE) was conducted to further evaluate the roundabout alternative as compared to a traffic signal. The ICE study determined that a single-lane roundabout would outperform a traffic signal in regard to safety, and would adequately service commuters.

3.0 Project Alternatives

One Build Alternative was developed for this PD&E Project. The Build Alternative proposes raising the profile of SR 72 and SR 70 above the current elevation. Roadside ditches and a dry detention pond are also proposed to manage and mitigate flooding concerns. Another improvement that was adopted from previous traffic studies was introducing a roundabout at the intersection of SR 72 and SR 70. This improvement addresses the safety needs of the project by reducing the overall severity of crashes as well as the overall number of crashes as compared to the current stop control. The roundabout would require realigning the SR 72 and SR 70 alignments to the north in order for the intersection to operate safely. The main typical sections (Appendix A) for both SR 72 and SR 70 consists of two 12-foot lanes with 10-foot shoulders (5-foot paved) with various configurations of roadside and treatment ditches. The right-of-way widths vary along both SR 70 and SR 72 as shown on the typical sections.

4.0 Methodology

A contamination screening was conducted to identify contamination issues from properties or operations located within the vicinity of the project. This evaluation consisted of the following tasks:

- Aerial photographs were reviewed to develop a history of the previous land uses within the study area and to identify sites which may have historical uses that pose contamination concerns. Aerial photographs dated 1943, 1952, 1959, 1960, 1968, 1975, 1979, 1985, 1992, 1994, 1999, 2007, 2010, 2015, and 2019 provided by EDR were reviewed for this project. Additionally, aerial photographs from the DeSoto County Property Appraiser and Google Earth (1996, 1999, 2004-2008, 2010-2014, 2016-2017, and 2019-2022) databases were used for instances where additional coverage, and/or better quality of photographs may have been required. Copies of historical aerial photographs are presented in Appendix B.
- Topographic map review using imagery available from the United States Geological Survey (USGS) website. Topographic maps can be useful identifying contamination concerns such as railroads, mine lands, bulk storage tanks, and landfills/disturbed lands. Additionally, land use and water features, including elevation contours can be identified on topographic maps. The USGS 7.5-Minute "Arcadia, Florida"

Quadrangle maps dated 1957, 1972, 1988, 2012, 2015, and 2018, and USGS 7.5-Minute “Nocatee, Florida” Quadrangle maps dated 1956, 1970, 1987, 2012, 2015, and 2018 were reviewed as part of this study. The topographic maps are provided in Appendix C.

- The Florida Department of Environmental Protection (FDEP) Contamination Locator Map (<https://prodenv.dep.state.fl.us/DepClnup>) was reviewed for contamination sites to determine potential sites, addresses, and other pertinent information.
- An environmental database search using Environmental Data Resources, Inc. (EDR/Lightbox) was conducted on May 25, 2023, to identify sites, facilities or listings within the study area containing documented or suspected petroleum contamination or other hazardous materials. The search distances are as follows:
 - 500 feet from the right-of-way (ROW) line for petroleum, drycleaners, and non-petroleum sites,
 - 1,000 feet from the ROW line for non-landfill solid waste sites (such as recycling facilities, transfer stations, and debris placement areas), and
 - ½ mile from the ROW line for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), National Priorities List (NPL) Superfund sites, or Landfill sites.
- The EDR report is used as a preliminary screening tool to identify facilities that are registered with various county, state, and federal agencies. The regulatory review of federal and state environmental records utilizes an integrated geographic information system database. The database report provides geocoded and non-geocoded regulatory listings of interest that are identified within the study area. Each listing is located by address, facility identification number and field verified where possible. All are reviewed for the potential of contamination to impact the project. The reviewed records include information compiled by the United States Environmental Protection Agency (EPA), the FDEP, and other various reporting programs. A complete list of all regulatory record databases searched is included in the environmental database search report, provided in Appendix D. The facilities identified in the EDR report are evaluated in Section 8.0. Supplemental information obtained from the FDEP OCULUS database, and other regulatory databases are included in Appendix F.
- Performed a site reconnaissance on June 2, 2023, to identify new and/or undocumented contamination sites, and to verify locations of documented contamination sites. Select photographs are provided in Appendix E.
- Assigned risk ratings for each contamination site or pond after evaluating the findings of each of the previously mentioned methodologies. The rating system defined in PD&E Manual is divided into four categories of risk which express the degree of concern for contamination problems. The four degrees of risk ratings are “No,” “Low,” “Medium,” and “High” and are defined as follows:

No Risk Site

A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.

Low Risk Site

A review of available information indicates that past or current activities on the property have an ongoing contamination issue; the site has a hazardous waste generator identification (ID) number, or the site stores, handles, or manufactures hazardous materials. However, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there would be any contamination impacts to the project.

Medium Risk Site

After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a "Medium." Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.

High Risk Site

After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications ROW acquisition or have other potential transfer of contamination related liability to the FDOT.

5.0 Land Uses

Determination of previous land uses and occupancies is an important factor when evaluating the potential for contamination involvement. Developing a history of the project and surrounding areas can assist in determining the potential for releases or discharges of hazardous materials or petroleum products. To determine land uses for this project, a site reconnaissance was performed along with a review of historical aerial photographs, soils maps, and topographic maps.

The existing land use along SR 72 within the project limits is primarily agricultural with some residential parcels. An existing gas station is located on the southeast corner of the SR 72 and SR 70 intersection. Along SR 70, the existing land use consists mainly of recreational land, vacant land, or water (Peace River) commercial and services, residential high density, and residential medium density. Refer to **Figure 2** in Appendix A for the Existing Land Use Map.

The terrain of the project area generally slopes towards the Peace River. Within the project limits, SR 72 begins at elevation 50.0 feet NAVD and slopes to elevation 20.0 feet NAVD at the SR 70 intersection. Within the project limits, SR 70 western limits begin at elevation 32.0 feet NAVD but then flatten out to elevation 27.0 feet NAVD for most of the study limits before rising to elevation 30.0 feet to cross the Peace River. A Digital Elevation Model (DEM) was developed from 2019 USGS Statewide LiDAR data. Topographic information can be found in the EDR report in Appendix A.

There are twelve mapped soil units that intersect with the project study area (Soils Map **Figure 6** in Appendix A). Four of the units are mapped as hydric soils, while the other eight are not hydric though could contain hydric soil inclusions or become hydric under reducing conditions.

5.1 Site Reconnaissance

A site visit was conducted on June 2, 2023, to evaluate each property within and in close proximity to the mainline and drainage sites for contamination concerns. The site reconnaissance in conjunction with the desktop review allow the sites to be rated as to the degree of contamination concern as discussed in Section 4.0. The reconnaissance included a systematic inspection of each parcel along the project corridor, and surrounding areas looking for signs of contamination. This was achieved by driving, where possible, the project, and walking the parcels within and surrounding the project (where accessible) to gain specific information regarding the usage and condition of each contamination site. Photographs of the contamination concerns were taken during the site inspection. Select images are presented in Appendix E.

Some of the typical physical indicators for contamination concerns include: railroad tracks, fill ports and vent pipes associated with underground storage tanks (USTs), oil/petroleum staining, drums, chemical containers, refuse, illicit dumping, solid waste, stressed vegetation, dry cleaning facilities, material handling from adjacent businesses, petroleum dispensers, excavated areas, agricultural use, chemical mix/load areas, stormwater outfall areas, surface water indicators, groundwater monitor wells, restricted area/contamination/hazardous material/petroleum pipeline signage, cattle dip vats and other property uses that may present contamination concerns.

During the site reconnaissance, the project study area was observed from both the vehicle and on foot. Both SR 70 and SR 72 are two lane roads with turn lanes at the intersection of the two roads. The eastern limits of the project are adjacent to the approach for the bridge over the Peace River though the project limits do include the bridge over the relief channel of the river. The western project terminus is at the entrance road to the Peace River Campground, and the southern limits of the project are just north of CR 661. A gas station is located at the corner of SR 70 and SR 72, and a citrus grove is located along the western side of SR 72. Much of the project study area is undeveloped land.

The EDR report contained nine (9) documented contamination sites within the standard search radii described in Section 4.0. Nine (9) additional sites with potential contamination were noted during the field survey. The sites are discussed in detail below and shown on the Contamination Sites Map (**Figure 4**) along with the risk rating assigned to each location.

1. Sunny South Packing Company

This parcel, also known as Weller Grove, is a citrus grove adjacent to SR 72 along the western side south of SR 70. The facility has one registered tank, an above ground diesel fuel tank with a capacity of 1,000 gallons located in the center of the grove. The tank contains the appropriate containment system structure and does not have a record of any spills or non-compliance. The grove operation does not have any additional facilities for maintenance equipment or storage. Typical grove operations have been known to use chemicals as a part of the operation, though nothing was observed during the site inspection and no records exist of any chemical mishandling or other contamination. This site is being given a risk rating of MEDIUM due to the potential need for right-of-way from this property for the project. If work is proposed for the project within any of the grove site, there are concerns for residual impacts from herbicide and/or pesticide use for grove operations.

2. FDOT Maintenance Facility

This site located at 1190 West Oak Street is the FDOT Heartland Operations Center and Arcadia Maintenance Yard. Signs on the gates indicate that the facility has been relocated and is not currently in active use. The site contains a number of both above ground and underground storage tanks. These include a 10,000 gallon above ground tank, a 10,000-gallon underground tank, a 2,000-gallon underground tank, and a 560-gallon underground tank for vehicular diesel, a 10,000-gallon underground tank, a 6,000-gallon underground tank, three 4,000-gallon underground tanks, and a 10,000 gallon above ground tank for unleaded gasoline. A pollutant discharge of diesel fuel occurred at the facility in 1988 requiring cleanup and monitoring. According to FDEP records, the required cleanup was completed in June of 2020, and a No Further Action with an SRCO has been presented. No additional discharges or non-compliance was identified in the contamination records. Although this site is located within the search radii described in Section 4.0, due to its location from the proposed work and being on the opposite side of the Peace River as well as the nature of the contamination cleanup, the site was assigned a Risk Rating of LOW.

3. DeSoto Sod Company

The DeSoto Sod Company is located at 3250 Pearce St. which now is listed as R&L DeSoto LLC. The sod company is listed as closed, but there is still an agricultural operation present. The sod company had several registered tanks, including one 4,000 gallon above ground tank and one 10,000-gallon underground tank for vehicular diesel, and 4,000-gallon underground tank and one 888 gallon above ground tank for unleaded gasoline. A container labeled as 'caution - acid' was visible on the site near the above ground diesel tank. The container was properly sealed and resting on a pallet on a concrete pad under a roofed shed. There was no indication of leakage. No record of any discharge or tank non-compliance was found for the facility. Appropriate containment was observed at the above ground tank area. Based upon the current usage of the facility, the location in relation to the project, and the lack of any documented contamination, this site was assigned a Risk Rating of LOW.

4. Smith and Midwinter – Steane Property

The Smith and Midwinter-Steane Property is located at 1036 West Hickory Street. It is currently listed as a single-family residential site with an abandoned house and small garage structure located on the site. There was no indication of the use or storage of contamination materials at the property observed during the site visit. There was a record of a 500-gallon underground storage tank on the property containing an unknown/unreported substance. The facility was classified as a fuel-user, non-retail site and was included in the FDEP Abandoned Tank Restoration Program from an alleged discharge in 1992. As a part of this program, the site was cleaned up and received a No Further Action status in August 2007. The site is listed as closed and has no additional records documenting any contamination. Based upon this information, the location of the site outside of the project area and across the Peace River, and the lack of any current usage of the site, it was assigned a Risk Rating of NO.

5. NW Baldwin and Hickory

This site was formerly associated with the City of Arcadia but is now the site of two single family residences at 101 and 105 North Baldwin Avenue. Two storage tanks were registered at this location: a 575-gallon underground tank and a 265-gallon underground tank, both of which contained unknown/unreported contents. A 25-gallon discharge was reported in 2012 requiring cleanup that was presumed to be gasoline or diesel fuel. The cleanup is listed as ongoing in the most recent update from the FDEP database, though both of the houses on the site appear relatively new (listed as 2019 on the property appraiser). There was no indication during the site visit of any contamination, cleanup, or monitoring at the site. Based upon this information and the distance to the project site, a Risk Rating of LOW was assigned to the site.

6. Pearce Avenue & CR 661 Debris Staging Area

This site was a disaster debris management site located south of the project site near Pearce Avenue and CR 661. There was no contamination reported, no record of storage of contaminated materials, and no evidence of usage or storage of contaminated materials during the site inspection. The site was given a No Further Action classification in the EDR Report, though no date was given for this in the report. Oculus does not contain any documents or files for this facility ID. Because of the location in relation to the project and the lack of contamination, the site was assigned a Risk Rating of NO.

7. Arcadia City – Garage

The Arcadia City Garage is located at 210 South Parker Avenue and is associated with the City of Arcadia Public Works. Four underground tanks are registered to this facility: a 1,000-gallon diesel tank, a 1,000-gallon unleaded gasoline tank, a 4,000-gallon diesel tank, and a 550-gallon kerosene tank. Three above ground tanks are also registered: a 5,000-gallon diesel tank, a 2,000-gallon waste oil tank, and a 5,000-gallon unleaded gasoline tank. A discharge of unleaded gasoline was reported in 1992 requiring cleanup. The cleanup status is listed as ongoing on the most recent FDEP Database report. The site is still active as part of the public works, and was seen as a cleanout for city garbage trucks, a storage facility for supplies including tires and industrial equipment. No evidence of contamination

cleanup or monitoring was observed during the field visit. Due to the location in relation to the project and being on the other side of the Peace River, the site was assigned a Risk Rating of LOW.

8. Jed's Food Mart #2

Jed's Food Mart #2, now operating as DeSoto Sign Company, is located at 1072 West Oak Street. This was a former retail station with three underground tanks registered for unleaded gas: two 6,000-gallon tanks and one 4,000-gallon tank. A discharge of unleaded gas was reported in 1994 that required cleanup. The FDEP reported the cleanup complete and issued a No Further Action status in 2016. The current use of the site as a sign company does not appear to use or store any contamination materials, though the pump island structure (without the fuel pumps) from the gas station is still present. Based upon the location of the site and No Further Action status, the site was assigned a Risk Rating of LOW.

9. Arcadia Housing Authority

This site is a former multi-family housing complex listed under the US Brownfields database located at 114 to 131 South Baldwin Avenue and 111 to 133 Jordan Avenue. The property is approximately 2.08 acres and contains 24 multi-family residential units located in seven buildings built in 1970 and now abandoned. They served as rental housing until 2004 when they were damaged in Hurricane Charlie. Asbestos, polycyclic aromatic hydrocarbons, (PAH's) were found in the soil in a subsequent Environmental Assessment allowing the EPA to classify the site under the Brownfields classification. No further information is available in the FDEP database at this time. Based upon the location of the site outside of the project area and across the other side of the Peace River, the site was assigned a Risk Rating of LOW.

10. Waste-water Treatment Facility

The City of Arcadia Municipal Water Facility is located at 222 South Parker Avenue. The site is not listed on the FDEP database or tank registration site. Several above ground tanks were visible from the entrance including one labeled as Sodium hypochlorite and one as diesel fuel. No obvious signs of contamination were observed on the site. Based upon the location of the site in relation to the project and the lack of recorded contamination, the site was assigned a Risk Rating of LOW.

11. Sunoco Gas Station #093006330

This gas station is located at the corner of SR 72 and SR 70 in the southeast quadrant is also known as Superstop Petroleum Inc III with an address of 2829 NW Highway 70. Although it was not included in the EDR database report, the site is listed in the FDEP Petroleum Contamination Database. The site has two 12,000-gallon underground storage tanks for unleaded gasoline. The facility has had prior non-compliance issues over the history of the facility and has been subject to enforcement by the FDEP Southwest District. The site is currently out of compliance following a routine inspection in May of 2022. However, the site does not have any history of discharges and no cleanup or monitoring for petroleum or other contaminants. Due to the proximity of the site to the project and the long history

of non-compliance, further investigation is warranted. This site has been assigned a Risk Rating of MEDIUM.

12. Arcadia Peace River Campground

The Peace River Campground is located at the northwestern side of the study area at 2998 NW Highway 70. This facility does not appear in the EDR report and does not show up in the FDEP database search for tanks or petroleum contamination. Numerous utilities were visibly marked including overhead electric, underground gas, underground water, and underground fiberoptic. A large above ground propane tank was located within the campground facility, and a maintenance area with heavy equipment was also observed. No indication of use or storage of hazardous materials was observed, and no record of contamination was identified. Based upon the location of the site in relation the project and the lack of any contamination on record, the site was assigned a Risk Rating of LOW.

13. Debris Pile

A debris pile consisting of old wood poles (power / phone) was located in the turnout of the campground road between SR 70 and the campground facility. There is no indication of how long the poles have been there. Though no ground disturbance was observed, the grass around the pile was dead. Based upon the location of this pile and the proposed location of the project, this site was given a Risk Rating of LOW.

14. Railroad Storage and Debris

There are railroad tracks that run north/south across West Oak Street (SR 70) just east of the Peace River. South of SR 70 along the tracks are various areas of storage materials and debris from railroad operations (and other equipment). There were no tanks visible though one of the train cars parked on the tracks was a tanker car. Based upon the location of the site in relation to the project, this site was assigned a Risk Rating of LOW.

15. 4 Parker Avenue

Two industrial operations were located at this address: Sanchez Machine Shop and Superior Powder Coating. There was an above ground propane tank on the side of the building where the machine shop was operating, and it appeared that the business was making aluminum fences. Behind the building, there were old trucks and RV's along with scrap metals being stored. There was no indication of any other above ground or underground tanks, and it was unclear if any contaminants were being handled or stored on site. Based upon the location of the site and distance from the project, this site was assigned a Risk Rating of LOW.

16. 108 Parker Avenue

There is another industrial operation located at 108 South Parker Avenue. There is a mixing facility, and it appears that they are making some type of concrete blocks, though there were many trucks and scrap metal being stored behind the building. An old tanker truck and several rusted above ground

tanks were also observed. There are no tanks registered for the site and it is unclear if contaminants are being used or stored on the site. Based upon the location in relation to the project, this site was assigned a Risk Rating of LOW.

17. 6 Parker Avenue

This site is another industrial operation that appears to be heavy equipment repair. There are many of trucks in the back and side of the building. There are no tanks registered to the site and it is unclear if contaminants are used or stored on the site. Based upon the location of the site in relation to the project, this site was assigned a Risk Rating of LOW.

18. DeSoto Gun Club

The DeSoto Gun Club is located at 2347 North Highway 70 on the south side of the road. The facility is a private operation, and the gate was locked during the site survey. There are several small buildings and sheds on the site, though very little of the site was visible from the front gate or the roadway. There are no tanks registered to the site and none were visible during the limited survey. Several semi-trailers were visible on the site from the view of SR 70. The site did have earthen berms set up for shooting. Based upon the location of the site in relation to the project and the lack of information, it was assigned a Risk Rating of LOW.

19. Turner Groves

The Turner Groves is a citrus grove operation west of SR 72 in the southwest corner of the project area. There are no registered storage tanks for this site, and there is no record in the database of any previous contamination issues. The grove operation does not have any additional facilities for maintenance equipment or storage. Typical grove operations have been known to use chemicals as a part of the operation, though nothing was observed during the site inspection and no records exist of any chemical mishandling or other contamination. This site is being given a Risk Rating of MEDIUM due to the potential need for right-of-way from this property for the project. If work is proposed for the project within any of the grove site, there are concerns for residual impacts from herbicide and/or pesticide use for grove operations.

20. SR 70 Peace River Relief Bridge #040002

This bridge structure on SR 70 spans the relief channel of the Peace River to the east of the proposed roundabout. The bridge is a flat-slab concrete bridge supported by pilings across the relief channel. No indication of any contamination is present in the FDEP Database or was observed during the field inspection. However, this bridge is assigned a Risk Rating of MEDIUM due to the potential presence of asbestos or metals-based coatings which could occur on this structure.

21. SR 70 Bridge over the Peace River # 040023

This bridge structure on SR 70 Spans the Peace River at the eastern edge of the project limits. This is a piling-supported concrete bridge over the river. There was no indication of any contamination during

the field inspection and no records exist for contamination in the FDEP database. This bridge is assigned a Risk Rating of MEDIUM due to the potential for asbestos or metals-based coatings to occur.

5.2 Historical Aerial Photograph Review

Aerial photographs were provided by EDR and reviewed for the project study area. The photos were from 1943, 1952, 1959, 1960, 1968, 1975, 1979, 1985, 1992, 1994, 1999, 2007, 2010, 2015, and 2019. A summary of the results is listed below:

1943 – SR 72 did not exist at this time, rather a road that skirted much of the wetland areas in the project area and cut further east of the existing location of SR 72 and continued north to connect to SR 70 much closer to the Peace River. SR 70 was in its present location and several citrus groves were present as in their current configuration.

1952 – The current configuration of SR 72 is now present as is the road that cuts south and east and connects to SR 70 as described in the 1943 summary. An agricultural operation and a residence were constructed in what is now the DeSoto Sod company off of Pearce Street.

1959 – Everything looks similar to the 1952 photo with a few more building at the operation on Pearce Street.

1960 – Everything is similar to the 1959 photo.

1968 – A few more buildings were added to the operation at Pearce Street. The road that bypasses SR 72 no longer connects to SR 70. In the area nearest SR 70, the Peace River Overflow bridge was constructed, and the overflow channel now exists (which cuts off the bypass road).

1975 – Some land clearing along SR 70 on the southside between SR 72 and the overflow channel has occurred, including a new linear water body being excavated. The Peace River Campground is now there, and an additional small development has started on N CR 661.

1979 – The gas station at the southeast corner of SR 72 and SR 70 is now there as is the business several hundred yards further east on SR 70. Many of the buildings that were at the Pearce Street site are gone.

1985 – A couple of residential lots were developed along the western side of SR 72 and along Pearce Street. The DeSoto Gun Club appears to be open. More residences are visible to the west along SR 70.

1992 – Several more citrus groves now occur further south off SR 72 south of the project area. More residences are visible north of SR 70 along North CR 661.

1994 – Everything looks similar to the 1992 aerial.

1999 – Everything looks similar to the 1994 aerial.

2007 – Everything looks similar to the 1999 aerial.

2010 – More residences have been added west along SR 70 and along North CR 661.

2015 – Everything looks similar to the 2010 aerial.

2019 – Everything looks similar to the 2015 aerial and to today.

5.3 USGS Topographical Map Review

USGS Topographical Maps were provided by EDR with the database report covering both the Arcadia Quad and Nocatee Quad. Maps provided for Arcadia covered years 1957, 1972, 1988, 2012, 2015, and 2018. Maps provided for Nocatee covered years 1956, 1970, 1987, 2012, 2015, and 2018.

1956-1957 – Both SR 70 and SR 72 appear in the current configuration on the map, The Seaboard Air Line Railroad and the Peace River appear as currently located. Much of the project area is drawn as wetland on the quad map. Citrus groves are also drawn in along the western side of SR 72. The city limits of Arcadia are delineated, and the streets are visible. A bypass road connects SR 72 to SR 70 just east of the Peace River.

1970-1972 – Much of the area appears the same as the previous maps. The majority of the project area is still mapped as wetlands, and no new development has occurred.

1987-1988 – The Peace River Campground is now visible in the northwest corner of the project site. The bypass road is now cutoff and does not connect to SR 70. Some additional residential areas are now visible west of the project area on both sides of SR 70.

2012 – Some new residential roads are located west along SR 70 and south along SR 72. Additional residential areas are located to the south of Arcadia.

2015 – The map appears the same as the 2012 maps.

2018 – The map appears the same as the 2015 maps.

6.0 Hydrologic Features

6.1 Aquifers of Florida

The Floridan aquifer is found throughout Florida and extends into the southern portions of Alabama, Georgia, and South Carolina. This aquifer system is comprised of a sequence of limestone and dolomite, which thickens from about 250 feet in Georgia to about 3000 feet in south Florida. The Floridan aquifer system has been divided into an upper and lower aquifer separated by a unit of lower permeability. The upper Floridan aquifer is the principal source of water supply in most of north and central Florida. In the southern portion of the state, where it is deeper and contains brackish water, the aquifer has been used for the injection of sewage and industrial waste. Groundwater flow is generally from high elevations within the central portion of the state towards the east and west coasts.

The surficial aquifer system in Florida includes any otherwise undefined aquifers that are present at land surface. The surficial aquifer is mainly used for domestic, commercial, or small municipal supplies. The surficial aquifer system is generally under unconfined, or water table conditions and is made up of mostly unconsolidated sand, shelly sand, and shell. The aquifer thickness is typically less than 50 feet.

Groundwater in the surficial aquifer generally flows from areas of higher elevation towards the coast or streams where it can discharge as base flow. Water enters the aquifer from rainfall and exits as base flow to streams, discharge to the coast, evapotranspiration, and downward recharge to deeper aquifers.

6.2 Hydrology – Site Reconnaissance

During the site reconnaissance, the Peace River was observed crossing SR 70 at the eastern terminus of the project area. The overflow channel crosses under SR 70 slightly west of the river crossing. Areas of wetlands were observed on both sides of SR 72 south of SR 70. Drainage ditches were observed along the roadways.

6.3 Hydrology – USGS 7.5 Minute Topographic Maps

Based upon the topographic maps, slope is toward the Peace River from the west and south within the project study area and from the east to the river from the Arcadia side.

7.0 Project Impacts

Based upon the information gathered from the database report and site investigation, the only potential contamination impacts could be within the area of the Sunoco Gas Station at the corner of SR 72 and SR 70. The dry retention pond proposed is within this area, and the proximity of the gas station, the long history of non-compliance, and the uncertainty of any potential underground contamination makes this area a priority for further investigation.

Table 2 - Contamination Risk Ratings

Site Number	Site Name and Address	Facility IDs	Distance	Risk Rating
1	Sunny South Packing Company NW Highway 70	(AST) 9500101 (EDR) A100180061	West side of SR 72	Medium
2	FDOT Maintenance Facility 1190 W. Oak St.	(LUST) 8842389 (EDR) U001348889	1/8 mile east	Low
3	DeSoto Sod Co. 3250 Pearce St	(UST) 8735872 (EDR) U001348805	1/6 mile southwest	Low
4	Smith and Midwinter – Steane Property 1036 W. Hickory St	(LUST) 9201624 (EDR) U001348912	1/4 mile east/southeast	No
5	NW Baldwin and Hickory 101 and 105 North Baldwin	(LUST) 9813212 (EDR) U004190748	1/4 mile east/southeast	Low
6	Pearce Avenue & CR 661 Debris staging	(SWF/LF) 98138 (EDR) S109688877	1/4 mile southwest	No
7	Arcadia City Garage 210 S Parker Ave	(LAST) 8837652 (EDR) U001037887	1/4 mile east/southeast	Low
8	Jed's Food Mart #2 1072 W. Oak St	(LUST) 8521217 (EDR) U001348770	1/4 mile east/southeast	Low

Site Number	Site Name and Address	Facility IDs	Distance	Risk Rating
9	Arcadia Housing Authority 114-131 South Baldwin and 111-133 Jordan Av	(BROWN) 175209 (EDR) 1016679604	1/2 mile east/southeast	Low

19	Turner Groves	N/A	SW on SR 72	Medium
20	SR 70 Relief Bridge	N/A	On SR 70	Medium
21	SR 70 Bridge over Peace River	N/A	On SR 70	Medium

8.0 Conclusions and Recommendations

8.1 Conclusions

Based upon this contamination screening evaluation, a total of twenty-one (21) potential contamination sites were identified with the search parameters of the study area. Zero (0) High Risk sites were identified. Five (5) Medium Risk site, fourteen (14) Low Risk sites, and two (2) No Risk Sites were identified. The drainage site for the project (a proposed dry pond) is located next to the Medium risk site and would also be considered Medium Risk.

8.2 Recommendations

Based on the conclusions of this study and the risk ratings noted above, the following recommendations are made.

- Additional information may become available or site-specific conditions may change from the time this report was prepared and should be considered prior to acquiring right-of-way and/or proceeding with roadway construction. If the preferred alignment changes or preferred pond site(s) are selected, and/or

new potential contamination sites have been constructed, this report should be revised and updated to reflect those changes.

- For the locations rated No or Low for contamination, no further action is required. These locations have been determined not to have any contamination risk to the study area at this time.
- Five contamination sites were rated Medium: Site 1 – Sunny South Packing, #9500101, Site 11 – Sunoco Gas #093006330 (AKA Superstop Petroleum), Site 19 – Turner Groves, Site 20 – SR 70 Relief Bridge over the Peace River, and Site 21 – SR 70 Bridge over the Peace River. Further evaluation and Level II testing, if deemed appropriate by the District Contamination Impact Coordinator, is recommended for these site. The Level II can include hazardous material surveys, soil borings, monitor well installation, soil and groundwater sampling, laboratory testing, and the use of Organic Vapor Analyzer and Ground Penetrating Radar. Soil and groundwater analytical testing for these sites may include Total Recoverable Petroleum Hydrocarbons (TRPH) by the Florida PRO Method, Benzene, Toluene, Ethylbenzene, Xylenes/Methyl tertiary-butyl ether (BTEX/MTBE) by United States Environmental Protection Agency (EPA) Method 8260, and Polyaromatic Hydrocarbons (PAHs) by EPA Method 8270. Detections above the regulatory standard may require additional samples for delineation purposes. Level II testing costs are estimated at \$5,000 to \$10,000 per site. For the two bridges, an asbestos survey and screening for metals-based coatings should be performed. This may include arsenic, cadmium, chromium, lead, and zinc by EPA Method 6010. For asbestos, Polarized Light Microscopy testing should be performed using EPA Method 600/R-93/116. Level II testing costs are estimated at \$2,000 to \$10,000 per site.
- Once final design plans are available, additional review is recommended in consideration of dewatering operations that may be necessary under the National Pollutant Discharge Elimination System Generic Permit for Stormwater Discharges from Large and Small Construction Activities. Verification testing may be warranted for contamination issues within 500 feet of the dewatering area. If Level III support is needed for National Pollution Discharge Elimination System permitting and treatment, costs can reach up to \$100,000 per site.
- During construction, for unidentified areas of contamination not identified in this report, if abnormal conditions are encountered or exposed indicating the presence of contaminated materials, cease operations immediately in the vicinity and notify the Engineer, and the County's designated representative. The presence of tanks or barrels; discolored earth, metal, wood, ground water, etc.; visible fumes; abnormal odors; excessively hot earth; smoke; or other conditions that appear abnormal may indicate the presence of contaminated materials and must be treated with extreme caution. These unidentified contamination areas should be managed in accordance with FDOT Specification 120-1.2 Unidentified Areas of Contamination.

TYPICAL SECTION No. 4

The diagram illustrates a cross-section of a two-lane highway with a centerline. Key dimensions include:

- R/W LINE:** Total right-of-way width.
- R/W (100'):** Right-of-way width from the left R/W line to the centerline.
- R/W VARIES (100' - 102'):** Variable right-of-way width from the centerline to the right R/W line.
- BORDER WIDTH (78'):** Width from the left R/W line to the start of the travel lanes.
- BORDER WIDTH VARIES (78' - 80'):** Variable border width from the centerline to the right R/W line.
- Clear Zones:** 36' clear zone on both sides of the travel lanes.
- Travel Lanes:** Two 12' wide travel lanes with arrows indicating traffic flow.
- Shoulders:** 10' shoulder on each side of the travel lanes.
- Pavement:** Pavement thicknesses are indicated as 0.06, 0.02, 0.02, and 0.06 feet.
- Natural Ground:** The existing ground profile is shown below the pavement structure.
- Grades:** Slopes are indicated as 1:4, 1:3, 1:6, and 1:4.
- Centerline:** Centerline of SR 72.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 1 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
PEARCE AVE & CR661 D Database: SWF/LF, Date of Government Version: 01/09/2023 Facility-Site Id: 98138 Class Status: NFA,NO FURTHER ACTION (F)	NEAR SR72-PEARCE AVE	SW 1/4 - 1/2 (0.384 mi.)	6	45

Lists of state and tribal leaking storage tanks

LAST: The file for Leaking Aboveground Storage Tanks. Please remember STCM does not track the source of the discharge so the agency provides a list of facilities with an aboveground tank and an open discharge split by facilities with aboveground tanks only and facilities with aboveground and underground tanks.

A review of the LAST list, as provided by EDR, and dated 01/23/2023 has revealed that there is 1 LAST site within approximately 1 miles of the target property.

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's PCTO1--Petroleum Contamination Detail Report.

A review of the LUST list, as provided by EDR, and dated 01/23/2023 has revealed that there are 5 LUST sites within approximately 1 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 1 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 04/06/2023 has revealed that there is 1 US BROWNFIELDS site within approximately 1 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARCADIA HOUSING AUTH ACRES property ID: 175209	111 JORDAN AVENUE	ESE 1/4 - 1/2 (0.457 mi.)	9	60

Other Ascertainable Records

DWM CONTAM: A listing of active or known sites. The listing includes sites that need cleanup but are not actively being working on because the agency currently does not have funding (primarily petroleum and drycleaning).

A review of the DWM CONTAM list, as provided by EDR, and dated 10/12/2022 has revealed that there are 5 DWM CONTAM sites within approximately 1 miles of the target property.

133 Jordan Avenue in Arcadia, DeSoto County, Florida, on parcels 36-37-24-0404-00F0-0040 and 36-37-24-0404-00G0-0040. The property covers approximately 2.085 acres of land west of downtown Arcadia. The property is currently developed with 24 multi-family residential units located in seven buildings, which were built in 1970, but are now abandoned. The units served as rental housing from 1970 until 2004, when the units were significantly damaged by Hurricane Charlie and subsequently vacated. There have been no other active uses of the property since it was abandoned in 2004. Former Use: The Arcadia Housing Authority is the current owner of the property. Previous owners are not identified.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/26/2023	Source: EPA

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2023	Source: EPA
Date Data Arrived at EDR: 05/02/2023	Telephone: N/A

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans.

It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilities name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Southeast Map:	11548224 ARCADIA, FL
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
NOCATEE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Bradenton

Soil Surface Texture: fine sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sand	Not reported	Not reported	Max: 4 Min: 0.42	Max: 8.4 Min: 7.4
2	3 inches	9 inches	fine sand	Not reported	Not reported	Max: 4 Min: 0.42	Max: 8.4 Min: 7.4
3	9 inches	25 inches	fine sandy loam	Not reported	Not reported	Max: 4 Min: 0.42	Max: 8.4 Min: 7.4
4	25 inches	70 inches	loamy fine sand	Not reported	Not reported	Max: 4 Min: 0.42	Max: 8.4 Min: 7.4
5	70 inches	79 inches	fine sandy loam	Not reported	Not reported	Max: 4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: Floridana

Soil Surface Texture: mucky fine sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	mucky fine sand	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 4.5
2	20 inches	25 inches	fine sand	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 4.5
3	25 inches	79 inches	fine sandy loam	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 4.5

Soil Map ID: 3

Soil Component Name: Wabasso

Soil Surface Texture: fine sand

Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sand	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.1
2	3 inches	30 inches	fine sand	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
3	30 inches	55 inches	fine sandy loam	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.1
4	55 inches	79 inches	sandy clay loam	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.
